

C CONTROL PANEL

7550

- The Series 7550 is a family of self contained control panels that provide a complete control system designed for accurate and safe control of our inline air heaters.
- These control panels contain a proprietary micro-processor based Process Temperature Controller and solid state relay which use rapid response technology to provide accurate air temperature control.
- The control system also has an independent high limit temperature controller that de-energizes the built-in safety contactor if an unexpected condition attempts to overheat the heating element.

Model No.	Line Voltage	Current	Phase
7550-A20	120/208/240	20 AMPS	1
7550-A40	120/208/240	40 AMPS	1
7550-C20	277	20 AMPS	1
7550-C40	277	40 AMPS	1
7550-D20	480	20 AMPS	1
7550-D40	480	40 AMPS	1
7550-B20	208/240	20 AMPS	3
7550-B40	208/240	40 AMPS	3
7550-E20	480	20 AMPS	3
7550-E40	480	40 AMPS	3
